

They happily do the dirty work for you.

Tools and dust extractors from Bosch.

Whether structural work, refurbishment or renovation: jobsites are tough places. Circular saws, tile cutters, angle grinders, wall chasers, concrete grinders, combi and rotary hammers produce a lot of dust when used. This is where the dust extractors from Bosch are in their element.

Our Click & Clean System collects the dust straight-away where it originates, and it ensures a better view and protects your airways. This enables you to work more quickly and comfortably. Equipped with the right products from the Bosch Click & Clean System, not only will you meet every deadline, you will also comply with the strict health and safety measures.

And not only your health is protected, but also your power tools and accessories.

18 | Structural work, refurbishment and renovation

Structural work is a job for tough guys. And Bosch ensures that everything fits.

To achieve completely satisfactory results, everything has to work together perfectly. This is why Bosch develops dust extraction systems, power tools and accessories that are precisely harmonised with each other. We therefore make work easier for you by providing the greatest possible compatibility. Find out for yourself about the advantages of the Bosch Click & Clean System:

GWS 15-125 CIE Professional angle grinder

Maximum performance with a high level of user protection and a clean result with fast work progress: all Bosch dust extractors with 35 mm hose system offer optimum dust extraction when cutting with Bosch angle grinders. The dust extraction guard with cutting guide provides

large support surfaces and very good extraction performance. Of course, the new Click & Clean System also works perfectly with the GWS 18 V-LI and GWS 18-125 V-LI Professional cordless angle grinders.

GBR 14 CA Professional concrete grinder

Clean lasts longer: the patented dustproof system ensures an unrivalled lifetime. Excellent tool control enables you to achieve a great grinding result. Maximum user protection due to soft start, starting current limitation, overload protection and armoured coil.

GNF 20 CA/35 CA/65 A Professional wall chasers

Wall chasers with dust extraction port: the patented dustproof system from Bosch guarantees the longest lifetime. Maximum user protection due to closed protective guard, restart lock and plunge lock.

Dust extraction hammer with SDS-plus: GBH 2-23 REA Professional

The flexible solution for drilling and hammer drilling: the GBH 2-23 REA Professional dust extraction hammer can be used with the supplied, detachable dust box to work in tight spaces or overhead. When large amounts of dust are present or you are drilling rows of holes, the

dust extraction hammer can be simply connected to a dust extractor using an optional adapter set. Retaining valves reliably prevent dust from escaping in every application. The adapter set also enables low levels of dust when working with core cutters.

20 | Structural work, refurbishment and renovation

Everything works hand in hand on the jobsite. **This begins with the tools.**

GTR 30 CE Professional tile router

Work cleanly by dry drilling with dust extraction. The tool comes complete with a dust extraction hose. The GTR 30 CE Professional offers a wide range of applications from simple circular cutouts through to freehand

cuts. The vertical hold on the tool ensures the best possible view of the work surface and maximum control.

GCT 115 Professional tile cutter

Everything's there, except for dust: the GCT 115 Professional tile cutter is the ideal solution for working with low dust levels in tiles thanks to its dust extraction protective guard, dust extraction hose and hose fixing directly on the tool.

GTS 10 XC and GTS 10 J Professional table saw with dust extraction adapter

Two in one swoop: dust is extracted with a dust extractor at two points using the TSVH 3 dust extraction adapter. This is done directly on the protective guard and on the back of the tool. Less dust – more result.

GKS 65 GCE Professional hand-held circular saw

Keep track of everything at all times: the professional dust extraction system with dust extraction adapter ensures low levels of dust when sawing, so that you always have a clear view of the cutting position. The same also applies, of course, to our GKS 18 V-LI Professional and GKS 36 V-LI Professional cordless circular saws and many other corded circular saws.

GCM 12 JL Professional mitre saw

Perfectly harmonised with all Bosch dust extractors: the optimised dust extraction outlet ensures that chips are collected in the best possible way. What's more, you always achieve a good cut with the powerful 2000 watt motor.

Integrated spacers enable lightning fast changing between maximum horizontal and maximum vertical cutting capacity.
