

# 2.4

## Pilot Actuated Valves

Selected valves can be used for technical vacuum too.

Selected models are available for low temperature application.  
For detailed information refer to chapter 2.11.

Selected models can be equipped with FKM seals for high temperature environment up to 120 °C.

**316** Selected models are available in stainless steel.  
For detailed information refer to chapter 2.12.

Selected models are available for explosion hazardous environment. They are ATEX-Ex certified.  
For detailed information refer to chapter 2.14.

# P 310 302/P 310 502

**P 310 302**

Pneumatically actuated 3/2-way spool valve with air spring return.

If pressure is attached to port 1 the function is normally closed.

If pressure is applied to port 3 the function is normally open.

Do not attach pressure at port 2.

Operating pressure and actuating pressure should be at the same level.

Exhaust can be throttled.

**P 310 502**

Pneumatically actuated 3/2-way spool valve.

Type P 310 \_\_\_ with air-spring-return.  
Operating pressure and actuating pressure should be at the same level.

Type P 311 \_\_\_ with mechanical spring return.

If pressure is attached to port 1 the function is normally closed.

If pressure is applied to port 3 the function is normally open.

Pressure can only be attached to port 2 if valve has a mechanical spring (type P 311\_\_\_).

If 2/2-way is required, please use type P 311 \_\_\_\_.  
Ports can be fully plugged.

The G-Series valves offer the flexibility of in-line fitment as well as the option of being assembled on to a manifold as shown. Plates are displayed on page 2.7.1.4 and 2.7.1.5.

Take into consideration that G 1/2" valves have to be assembled onto the plate by fixing screws from the bottom through the plate into the valve.

Exhaust can be throttled.

### VA 341/VA 361/VA 401: OR-gate

The OR-gate has two inputs 1 and one output 2.

The shuttle valve is used when only one of two possible signals is required to pass on a signal.

Function: If one of two signal inputs are activated, an output signal on port 2 is present and the other input is blocked.

In case of pressurising both inputs at different pressure levels, the higher pressure is fed to port 2.

### ES 341/ES 401: AND-gate

The AND-gate has two inputs 1 and one output 2.

The dual-pressure valve is used when at least 2 signals are required before a signal is passed on.

Function: Only when both inputs are pressurised output 2 is pressurised.

If two different pressures are applied the lower pressure is fed to output 2.

In case of only one signal at one of the two ports 1, the output 2 is blocked.

P 411 701 SR/P 411 701 SR NPT

**P 311 501 SR** pneumatically actuated 3/2-way valve with mechanical spring return. Valve can be used normally closed (pressure at port 1) and normally open (pressure at port 3). Can also be used as 2/2-way valve. Unused port to be closed with a silencer or plug.

**P 411 701 SR** pneumatically actuated 4/2-way valve with mechanical spring return. Valve either blocks all ports or is open from 1 to 4 and from 3 to 2. Port 5 is a vent port and should have a silencer installed, do not plug.

Valve can be used as an **adjustable pneumatic pressure switch**. By turning the hand-wheel the required minimum actuation pressure can be set. Adjustment is not independent from operation pressure. Switch-on pressure differs from switch-off pressure due to a hysteresis of around 1.5 bar. The hysteresis is the difference between the pressure point when the valve is opening (e.g. 5 bar) and closing (e.g. 3.5). The 1.5 bar hysteresis is just a reference point as it is depending on the friction force. The proportion between the friction force and the force of the air is changing when the air pressure increases. Therefore the hysteresis is getting smaller when the set actuating pressure increases.

DSV-1/4

DSVH-1/8

DSVH-1/4

Pressure holding valves to hold a double acting actuator at the current position in case of pressure failure.

The valve consists of two non-return valves which will be unlocked by pressurising port P1 or P2.

Installation between pilot valve and actuator.

This valve is often used for gripper-applications. In case of pressure failure, the Hafner valve is locking the air in the gripper and thereby it does not lose its load.

Type DSVH with manual exhaust function. The user can exhaust the actuator manually by pushing the manual exhaust buttons.

Inner parts are made of brass and POM, seals are made of NBR.

# PFF 520 701/PFFR 520 701

PFF 520 701

PFFR 520 701

Valves to generate oscillating movements for devices where continuous cycling is required, e.g. shaking, hammering, scraping, wiping, dipping etc.

**Oscillating valve type PFF 520 701:**

When compressed air is applied to port 1, the outlet ports 2 and 4 are alternately supplied with compressed air.

The valve always moves the position as soon as the cylinder has reached the end position and a back pressure is applied to the valve.

**Flip-Flop valve type PFFR 520 701:**

The PFFR is a bistable 5/2-way valve, which is operated by only one pilot port.

When a signal is applied to pilot port X, the valve is switching the position. It will remain in this position even if the signal is taken away.

When the pilot signal is applied to port X again, the valve will switch the position again.

The speed of the operated cylinder and thus the frequency can be adjusted by adding flow regulators to the exhaust ports 3 and 5 of the valve. Please ask for SVE-1/4.

Block form flow regulator.

Type DR  
uni-directional block form flow regulator.  
Air streaming in the direction of the throttle can be regulated by turning the spindle. In the opposite direction air streams unthrottled.

Type D  
bi-directional flow regulator. Air is regulated in both directions.

The throttle can be adjusted very precisely along the entire regulation range.

Adjustment can be locked.

Suitable for wall and panel mounting.  
Nut is included.

2.4.6.4

page 80

VA 304/ES 304

### VA 304: OR-gate

The OR-gate has two inputs 1 and one output 2.

The shuttle valve is used when only one of two possible signals is required to pass on a signal.

Function: If one of two signal inputs are activated, an output signal on port 2 is present and the other input is blocked.

In case of pressurising both inputs at different pressure levels, the higher pressure is fed to port 2.

### ES 304: AND-gate

The AND-gate has two inputs 1 and one output 2.

The dual-pressure valve is used when at least 2 signals are required before a signal is passed on.

Function: Only when both inputs are pressurised output 2 is pressurised.

If two different pressures are applied the lower pressure is fed to output 2.

In case of only one signal at one of the two ports 1, the output 2 is blocked.

RP 2 344

Both elements can be assembled to RP 2 344. Plate can carry 2 pieces AND- or OR-gates. Both types can be mixed on the plate. The plate is equipped with 6 push-in fittings for 4 mm tube.
