

GROUP LOCKOUT BOXES

The OSHA standard for The Control of Hazardous Energy (Lockout/Tagout): Title 29 (CFR) Part 1910.147

Group lockout boxes are a great solution for isolating energy points when a large team is working. Using a group lockout box allows you to dramatically reduce the amount of locks required on a job, limit weight on each energy point by eliminating hasps, and it provides a quick overview of who is still working without going to each energy point.

PRODUCT DESCRIPTION	PRODUCT CODE
Group Lockout Box - Steel	LM-GLOB
Group Lockout Box – with slider window	LM-GLOB-NS
Group Lockout Box, Thermoplast	LM-GLOB-2R

Group Lockout Boxes are storage devices that can be used to store keys for the effective lockout of large equipment

LM-GLOB

LM-GLOB-SL

LM-GLOB-2R

Each lockout point on the equipment is secured with a single padlock. Workers can place their keys in the group lockout box, then each authorised employee places their own personal padlock on to the lock box. Once the work has been completed, the employees remove their personal padlock from the lock box therefore freeing the keys inside. Group Lockout Boxes act to ensure that the keys cannot be accessed until the last lock has been removed.
