LM-BFVL	12" 305 mm.	2.750" 70 mm.	4.000" 102 mm.	0.375" 9.5 mm.

ASSEMBLY INSTRUCTIONS

INSTRUCTIONS FOR USE

When slid into position the wedge on the slider section prevents the compression handle being squeezed, preventing operation of the valve. The holes on the slider have a staggered repeat which ensures hole will be tight when placed against the valve. Padlock is used in the hole which is tight to the valve as possible to ensure proper lockout.

The OSHA standard for The Control of Hazardous Energy (Lockout/Tagout): Title 29 (CFR) Part 1910.147
