

**ELASTOMER MOUNTS** **page 21**

A complete range bringing a technical solution to neutralize the noise transmission and vibrations, and ensure a protection against shocks.

**ACOUSTIC FOAMS** **page 169**

A complete range of complex insulations and acoustics foams reduce the airborne noises (insulation absorption and damping).

**METAL MOUNTS** **page 193**

Reduce considerably the float and the frictions, the bushes minimize wear on moving parts and noises.

**FLEXIBLE BUSHES** **page 269**

Power Transmission from 2,5 to 100 000 N.m allowing to absorb radial, axial and angular misalignment as well as couple irregularities.

**FLEXIBLE COUPLINGS** **page 293**

Power transmission from 2,5 to 100 000 N.m allowing to absorb radial, axial and angular misalignment as well as couple irregularities.

**DYNAMIC SEALINGS** **page 344**

Seals for rotating shafts. More than 2 000 references constantly evolving on materials and profiles, allowing to satisfy on industrial market requirements.
