Venting and Non-venting Ball Valve

5.5
62

Description

A full bore ball valve suitable for compressed air and other fluids and gases compatible with the materials of construction and pressure/temperature limits (contact Spirax Sarco for details). It is designed to provide dead tight shut-off for pneumatic and other applications.

When the valve is moved to the closed position (supply off) on self-venting models, the downstream pressure will slowly exhaust through the vent orifice (V). Self-venting models carry a flow direction arrow.

The illustration shows the self-venting valve in the closed position.

Principal features:

- Full bore for good flow characteristics (to BS 5351).
- Suitable for inert industrial gases.
- Suitable for water and other similar fluids.
- All PTFE seals.
- Hard chrome self-cleaning ball.
- Anti blow-out stem and inner seal.

Sizes and end connections

V - Venting 1/4", 3/8", 1/2", 3/4", and 1" screwed BSP

NV - Non-venting 1/4", 3/8", 1/2", 3/4", 1", 1 1/4", 1 1/2" and 2" screwed BSP
